1 SCHEMA OVERVIEW

This document contains all the validation rules, which must be passed to enable a successful upload onto ROS for Form-CT1 returns.

These include for each attribute or element:

- Correct data formats
- Maximum and minimum values where applicable
- Dependent attributes or elements – other elements that must not be null or other attributes for which values must be returned in certain circumstances.

The file will consist of a root FormCt1 element.

Please note:

- The XML message must be encoded using UTF-8. The first line within the XML message must indicate this.
- Revenue will use the JAXB API to marshal XML documents submitted to Revenue that conform to this schema. Therefore your XML submissions must strictly conform to the schema definition outlined in the XSD and it must not break any of the validation rules stated in this document in order for your submission to be successfully uploaded.

2.20 SelfAssessmentCt

CT1 returns with an accounting period end date (@accountperiodenddate) on or after 01/01/2014 must provide a completed Self Assessment of their CT Liability. This is done by returning the *SelfAssessmentCt* element.

Additional validation rule being applied to the fields on the SelfAssessmentCt element:

A validation rule is being added to ensure that the returns uploaded have 'Column A' figures (attributes marked as **Revenue Calculation**** in the section below) that match the figures calculated for these fields.

A core principle of Full Self Assessment is that filers see the Revenue calculated figures for their return and either agree or disagree with these figures. This validation rule is being added to ensure that all filers see the Revenue calculated figures before completing their self assessment figures into 'Column B' (fields marked as **Self-Assessment **** in the section below).

Here are the options available to retrieve 'Column A' figures from ROS:

- 1) If your software creates an XML file to be uploaded via the 'Upload Form(s) Completed Off-line' function on ROS, before uploading the file you should:
 - a. Open the file using the ROS Offline application
 - b. Navigate to the 'CT Self Assessment' panel. Column A figures will be populated.

- c. In order to save the Column A figures into your return, you must save your return on ROS Offline. In order to do this you must rectify any validation errors that are displayed. In order to save the return, select **File -> Save** on the top left hand corner of the application.
 - d. You can then then open your return using your software product or submit it to Revenue via ROS.
- 2) Retrieve Column A figures from the ROS web-service using the **CT1/Calculate** operation. The ROS webservice performs two steps when it receives a return, firstly it validates the return, if a return passes validation it calculates the liability for that return and populates Column A. Therefore, in order to retrieve Column A figures from the web-service, a valid self-assessed return must be submitted. Here are the steps that must be followed before Column A figures will be returned:
 - a. Leave the Column A figures blank.
 - b. Fill in Column B figures (zero values will suffice).
 - c. Disagree with the figures in Column A (@agreewithfigures="false")
 - d. Tick the 'I declare the above to be my Self Assessment to Corporation Tax..' field (@declareselfassessment="true")

See [Appendix 6 – CT Self Assessment](#) for a sample response that the webservice will return when all other validation rules are passed but the Column A figures are incorrect.

2.22 Prepopulation

The Prepopulation element has no attributes. It consists of the following optional sub-elements:

Prepopulated

Note:

The Prepopulation element will be present when a new pre-populated FormCT1 return is downloaded.

If the Prepopulation element is present when a FormCT1 is submitted, it will have no effect and will be ignored.

A Pre-populated Form CT1 contains the following value in the "product" attribute: ROS-PREPOP-CT1. This should be overwritten with the software/company name as returns containing this value will not be accepted. This is also included in the Form CT1 element description above.

2.22.1 Prepopulated

The Prepopulated element has no attributes. It consists of one or more of the following sub-elements:

PrepopulatedPanel

Note:

The Prepopulated element will be present when a pre-populated new FormCT1 return is downloaded.

It will contain a PrepopulatedPanel child element for every panel in the FormCT1, where each PrepopulatedPanel element indicates if the associated panel contains pre-populated data from the previous return.

If the Prepopulated element is present when a FormCT1 is being submitted, it will have no effect and will be ignored.

2.22.1.1 PrepopulatedPanel

This element has the following attributes:

Name	Type	Required (Y/N)	Description / Validation
panelname	Alpha	Y	The name of the panel
populated	Alpha	Y	Whether this panel contains prepopulated data from the previous return.

3 VALIDATION

Notes:

* SelfAssessmentCt element: CT1 returns with an accounting period start date (@accountperiodstartdate) on or after 01/01/2013 must provide a completed Self Assessment of their CT Liability. This is done by returning the SelfAssessmentCt element.

Returns with an accounting period start date (@accountperiodstartdate) prior to 01/01/2013 are not subjected to the Self Assessment rules and therefore should not contain the SelfAssessmentCt element. Such forms will fail validation.

9 APPENDIX 6 – CT SELF ASSESSMENT

When the Column A figures filed in the CT Self Assessment section of the return do not match the Revenue calculated figures and all other validation rules have been passed, here is the response that will be returned from the webservice.

The <SelfAssessmentCt> element will be updated to contain the Column A figures as calculated by Revenue.
